**DiabRemind**  
**by Yashas Nair**

Selected as the **Most Innovative App Inventor** for the month of January 2018 by the **MIT –App Inventor( Massachusetts Institute of Technology, Cambridge, Massachusetts, United States)**.

His App **DiabRemind** is used to assist people with diabetes and helps them to manage critical/emergency situations. The app has been integrated with auditory signals to enable its user to be reminded of proper testing and food management time. In case of timely testing, it locates the nearest health services and in an eventuality of secondary assistance the user can with a single click, send SMS and voice call simultaneously, which is embedded with identifiable Geo-location on Google Maps for providing immediate medical assistance to the needy.

He is currently studying programming, and is interested in learning via finding practical approaches.
